Emerging Communication Technologies (Ect) Phase 3 Final Report (Paperback)

Filesize: 2.02 MB

Reviews

It in a of my personal favorite book. It really is filled with wisdom and knowledge Your daily life period will likely be enhance the instant you total looking at this pdf.

(Mr. Rocio Schroeder Sr.)

EMERGING COMMUNICATION TECHNOLOGIES (ECT) PHASE 3 FINAL REPORT (PAPERBACK)

DOWNLOAD

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.The National Aeronautics and Space Administration (NASA) is investigating alternative approaches, technologies, and communication network architectures to facilitate building the Spaceports and Ranges of the future. These investigations support the Crew Exploration Vehicle (CEV) and other associated craft presently under development or under consideration in Government, academic, and private sectors. These investigations also provide a national centralized RD forum for next-generation Spaceport and Range technology development. Together, these sectors all share the common goal of changing the historic risk/reward equation for access to space, with the intent to: Dramatically reduce launch cost, Greatly improve launch system reliability, Significantly reduce crew risk. Emerging Communication Technologies is a multi-year task investigating new communication technologies with likely high utility and application for future ranges and spaceports. In year one, the project was called Range Information Systems Management (RISM). This project investigated US ranges and documented their missions, capabilities, and infrastructures. A part of this investigation was the history of communication and the identification of certain technologies which might offer improved range capabilities in the near future. Three emerging technologies were identified: Free Space Optics (FSO), Ultra Wide Band (UWB), and Wireless Ethernet (Wi-Fi). All three of these technologies address the first mile / last mile communication solution. In year two, specific examples of FSO, UWB and Wi-Fi were purchased and evaluated for range application. The FSO hardware was an AirFiber 5800 optical transceiver. This unit includes an auto-tracking feature that keeps the two units in optical alignment during small movements that normally occur to support structures due to solar heating, winds and vibration. The units were tested over various distances and through various weather conditions.The primary objective for the Emerging Communication...
